DETAILED ACTION

The following is an examiner's statement of reasons for allowance: The present invention is directed to a virtual multi-channel speaker unit. Independent claim 1 identifies the uniquely distinct feature of a barrier separating the diaphragm from a backside of the casing and a conduit formed by the barrier and the backside of the casing to transmit sound waves from the backside of the diaphragm to an outlet hole being oriented toward the front of the diaphragm in combination with all the disclosed limitations of claim 1. Independent claim 2 identifies the uniquely distinct feature of a transmission conduit having an inlet hole on the backside of the diaphragm and an outlet hole being oriented toward the front of the diaphragm wherein the transmission conduit is constructed in a manner that a sound absorbent is formed at all passages through which sounds are transmitted in the transmission conduit in order to prevent a specific sound from being amplified in the transmission conduit in combination with all the disclosed limitations of claim 2. Independent claim 3 identifies the uniquely distinct feature of a transmission conduit having an inlet hole on the backside of the diaphragm and an outlet hole being oriented toward the front of the diaphragm wherein the transmission conduit is composed of multiple conduits formed in a bundle of at least one to ten conduits each having a small diameter in combination with all the disclosed limitations of claim 3. The closest prior art, Atoji et al (US 4239945) discloses a sealed headphone with a conduit for transmitting sound from the rear of the diaphragm to the front of the diaphragm but fails to teach a barrier separating the diaphragm from a backside of the casing and a conduit formed by the barrier and the backside of the casing, a sound absorbent is formed at all passages through which sounds are transmitted in

the transmission conduit in order to prevent a specific sound from being amplified in the transmission conduit or the transmission conduit is composed of multiple conduits formed in a bundle of at least one to ten conduits each having a small diameter. The prior art fails to anticipate or render the independent claims obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
